DETAILED ACTION

1. Claims 1-21 are pending.

Restriction Requirement

- 2. Restriction to one of the following inventions is required under 35 U.S.C. § 121:
- I. Claims 1-6, drawn to a method of activating the immune system in a mammal comprising administering to the mammal an effective amount of an IMXP-888 polypeptide, wherein IMXP-888 polypeptide comprises an amino acid sequence of residues 18 to 375 of SEQ ID NO:3 or a polypeptide that is at least 80 % homologous to a polypeptide sequence that encodes residues 18 to 375 of SEQ ID NO:3, classified in Class 424, subclass 184.1.
- II. Claims 1-4 and 6, drawn to a method of activating the immune system in a mammal comprising administering to the mammal an effective amount of an IMXP-888 polypeptide, wherein IMXP-888 polypeptide comprises an amino acid sequence of residues 13 to 371 of SEQ ID NO:1 or a polypeptide that is at least 80 % homologous to a polypeptide sequence that encodes residues 13 to 371 of SEQ ID NO:1, classified in Class 424, subclass 184.1.
- III. Claims 1-4 and 6, drawn to a method of activating the immune system in a mammal comprising administering to the mammal an effective amount of an IMXP-888 polypeptide, wherein IMXP-888 polypeptide comprises an amino acid sequence of residues 13 to 280 of SEQ ID NO:2 or a polypeptide that is at least 80 % homologous to a polypeptide sequence that encodes residues 13 to 280 of SEQ ID NO:2, classified in Class 424, subclass 184.1.
- IV. Claims 1-8, drawn to a method of activating the immune system in a mammal comprising administering to the mammal an effective amount of IMXP-888 polypeptide fused to a heterologous polypeptide, wherein IMXP-888 polypeptide comprises an amino acid sequence of residues 18 to 375 of SEQ ID NO:3 or a polypeptide that is at least 80 % homologous to a polypeptide sequence that encodes residues 18 to 375 of SEQ ID NO:3, classified in Class 424, subclass 192.1.

Page 3 Application/Control Number: 10/001,848 Art Unit: 1644 V. Claims 1-4 and 6-8, drawn to a method of activating the immune system in a mammal comprising administering to the mammal an effective amount of an IMXP-888 polypeptide fused to a heterologous polypeptide, wherein IMXP-888 polypeptide comprises an amino acid sequence of residues 13 to 371 of SEQ ID NO:1 or a polypeptide that is at least 80 % homologous to a polypeptide sequence that encodes residues 13 to 371 of SEO ID NO:1, classified in Class 424, subclass 192.1 VI. Claims 1-4 and 6-8, drawn to a method of activating the immune system in a mammal comprising administering to the mammal an effective amount of an IMXP-888 polypeptide fused to a heterologous polypeptide, wherein IMXP-888 polypeptide comprises an amino acid sequence of residues 13 to 280 of SEQ ID NO:2 or a polypeptide that is at least 80 % homologous to a polypeptide sequence that encodes residues 13 to 280 of SEQ ID NO:2, classified in Class 424, subclass 192.1. VII. Claims 9, 10 and 12, drawn to a method of treating an inflammatory disorder in a mammal, comprising administering an effective amount of an IMXP-888 antagonist, wherein an IMXP-888 antagonist is an antibody, classified in Class 424, subclasses 130.1 and 139.1 VIII. Claims 9,11 and 12, drawn to a method of treating an inflammatory disorder in a mammal, comprising administering an effective amount of an IMXP-888 antagonist, wherein an IMXP-888 antagonist is a ribozyme, classified in Class 424, subclass 184.1 IX. Claims 13-17, drawn to a method of using an IMXP-888 polypeptide to identify an IMXP-888 receptor, classified in Class 435, subclass 7.1. X. Claims 18 - 21, drawn to a method for identifying compound capable of enhancing or inhibiting a biological activity of an IMXP-888 polypeptide, classified in Class 435, subclass 7.1. 4. Groups I- X are different methods. These invention are different with respect to ingredients, method steps, and endpoints; therefore, each method is patentably distinct. 5. These inventions are distinct for the reasons given above. In addition, they have acquired a separate status in the art as shown by different classification and/or recognized divergent subject matter. Further, even though in some cases the classification is shared, a different field of search would be required based upon the structurally distinct products recited and the various methods of use comprising distinct method steps. Moreover, a prior art search also requires a literature search. It is an undue burden for the examiner to search more than one invention. Therefore restriction for examination purposes as indicated is proper.

Art Unit: 1644

Species Election

6. Applicant is further required under 35 USC 121 (1) to elect a single disclosed species to which the claims would be restricted if no generic claim is finally held to be allowable and (2) to list all claims readable thereon including those subsequently added.

A. If one of the Group I –VI is elected, applicant is required to elect a specific method of activating the immune system in a mammal, wherein a mammal has a condition selected from the group recited in claim 2.

These species are distinct because the specific a method of activating the immune system in a mammal, wherein a mammal has a condition selected from the group recited in claim 2 differ with respect to the specific condition; thus each specific method employing a specific condition represents patentably distinct subject matter that would require different searches in the scientific literature.

B. If Group IX is elected, applicant is required to elect a specific method of using an IMXP-888 polypeptide to identify an IMXP-888 receptor, wherein a specific hematopoietic cell is selected from the group recited in claim 15.

These species are distinct because the specific method of using an IMXP-888 polypeptide to identify an IMXP-888 receptor, wherein a specific hematopoietic cell is selected from the group recited in claim 15 differ with respect to the specific type of hematopoietic cell; thus each specific method employing a specific type of hematopoietic cell represents patentably distinct subject matter that would require different searches in the scientific literature.

7. Applicant is advised that a response to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 C.F.R. § 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. M.P.E.P. § 809.02(a).

Application/Control Number: 10/001,848

Art Unit: 1644

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. § 103 of the other invention.

- 8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).
- 9. A telephone call was made to Kathleen Fowler on 05/09/03 to request an oral election to the above restriction requirement, but did not result in an election being made.
- 10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michail Belyavskyi whose telephone number is (703) 308-4232. The examiner can normally be reached Monday through Friday from 9:00 AM to 5:30 PM. A message may be left on the examiner's voice mail service. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christina Chan can be reached on (703) 308-3973. Any inquiry of a general nature or relating to the status of this application should be directed to the Technology Center 1600 receptionist whose telephone number is (703) 308-0196.

Papers related to this application may be submitted to Technology Center 1600 by facsimile transmission. Papers should be faxed to Technology Center 1600 via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). The CM1 Fax Center telephone number is (703) 305-3014.
